

Project Manager (M/W)

STERIA currently hires experienced *Project Managers* who will lead projects using state of the art methodologies, to deliver first-class results.

Your Mission:

You clarify the objectives and the impact of the project in terms of deliverables, time frame, resources, quality and costs.

You manage and support the project team through all the delivery phases of the project.

You define the process of work and quality.

You plan the tasks and the required resources and control the progress status of the project.

You ensure the administrative and financial follow-up of the project.

You organize follow-up meetings with the customer and your management.

You detect new business opportunities on your project and initiate the sales process accordingly.

You are accountable for the project outcome within the contractual constraints.

Your Profile:

You have a master in computer science or equivalent valuable experience.

You have 5 years of experience in IT projects and 2 years in project management.

An effective experience in a JAVA, environment is a requirement.

You communicate easily with all the levels of the company, orally and in written.

Special training programs are in place for successful candidates, but previous experience with Prince2 (or PMI), UML and RUP methodologies is an asset.

You are flexible and organized and you master at least one project management tool.

Your native tongue is French or Dutch. A minimum knowledge of the second national language is necessary. A good command of English is required.
